Patient experience: Priti Handa

Operation: keyhole Endoscopic Discectomy for Recurrent Disc Prolapse

I am 36 years of age. After suffering from severe slip disc in L4-5 and after trying all sorts of conservative treatments like ayurvedic, homeopathic, chiropractics, physiotherapy etc. I ultimately reached Dr Arun Bhanot for Endoscopic Discectomy, which he did very well technically.

I got relieved of my pain immediately after the operation with just a 1 cm cut.

It is a very good procedure worth undertaking rather than suffering severe pain of slip disc.

I am getting discharged with no pain either of slip disc or of the operation on the third day of operation. Just a little post-operative weakness, which will go with good nutrition intake.

Hence I thank Dr Arun Bhanot from the depth of my heart for relieving me of my distress so quickly. God bless him.
